COMPUTERS & GEOSCIENCES

AN INTERNATIONAL JOURNAL

An official journal of the International Association for Mathematical Geology

Editor-in-Chief:q **DANIEL F MERRIAM**, *Stratigraphic Studies Group, Box 153, Wichita State University, Wichita, KS 67208, USA*

Computers & Geosciences serves as a public medium for the exchange of ideas between the geological and computer sciences. *Computers & Geosciences* brings to its readers computer programs, algorithms, computer-aided instructional material, programming guides and applications, together with other topics of interest to geoscientists working with computers. The term geoscience is used in its broadest sense, encompassing geology, geophysics, geochemistry, oceanography, hydrology, and geography. Papers are concerned with the computational aspects of all subjects ranging from file maintenance and data processing to the latest problem-solving techniques. The publication serves workers in academia, industry and government. Students, teachers, researchers and practitioners will all benefit from ideas in the journal.
In addition to the longer papers containing programs, the Editors welcome the submission of articles on algorithms, or discussion of techniques, Short Notes with timely material and Book Reviews of pertinent publications. Papers on comparative results and computer graphics are especially encouraged.

A Selection of Papers
J C TIPPER (Australia), FORTRAN programs to construct the planar Voronoi diagram.
J L BECKLEHIMER (USA), A FORTRAN program for computing beam patterns of geophone arrays.
L HARNOIS (Canada), TEA: a computer program in BASIC to calculate trace-element abundances in silicate rocks and magmas during melting and crystallization processes.
D BHASKARA RAO & N RAMESH BABU (India), A FORTRAN-77 computer program for three-dimensional analysis of gravity anomalies with variable density contrast.
C E BARTON & C Z TARLOWSKI (Australia), Geomagnetic, geocentric, and geodetic coordinate transformations.
P H A SNEATH & J C RADBOURNE (UK), DOTDND: a FORTRAN-77 program for showing graphically the confidence or uncertainty in phylogenetic trees.
